Setup Guide

In this course we're going to build a Kubernetes cluster ourselves. To prepare, make sure you install 3 virtual machines that meet the following requirements. Please safe some time and make sure this basic configuration is ready before joining class:

- Latest version of Ubuntu LTS Server
- 4 vCPUs on one VM, 2 vCPUs on two VMs
- 4 GB RAM on each
- 2 hard drives, with 20GB on each drive
